SUMMARY

M.Tech student in Artificial Intelligence at IIIT Bhopal with a strong foundation in Machine Learning, Data Analytics, and Full-Stack Web Development. Hands-on experience in developing MERN-stack, ML and Deep Learning based applications. I am very interested in contributing to solve real-world problems and looking for research and industry opportunities in AI/ML and software development.

EDUCATION

M.Tech, Artificial Intelligence | IIIT Bhopal | 2025 - Present

B.Tech, Information Technology | Andhra University | 2021 - 2025 | **8.66/10 CGPA**

Class XII (MPC) | Sri Chaitanya Institutions | 2021 | **96.0%**

Class X | Dr. Besant School | 2019 | **10/10 GPA**

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, C

AI/ML: Classification, Regression, Clustering | Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, FAISS, OPTUNA | ANN, CNN, RNN, LSTM, GRU, Transformers, PyTorch

Web Development: React.js, Node.js, Express.js, MongoDB, MySQL, JWT, RESTful APIs, Material UI

Tools & Platforms: Git, GitHub, Docker, GitHub Actions CI/CD, Google Colab, VS Code, Postman

PROJECTS

CineAI — Hybrid Movie Recommender System | GitHub | Live Demo

Python · Scikit-learn · LightGBM · PyTorch · SBERT · FAISS · Streamlit · HuggingFace

- Designed a two-stage retrieve-then-rank pipeline: SBERT + FAISS content retrieval followed by a LightGBM LambdaRank listwise ranker over 6 neural and statistical features.
- Addressed cold-start fallback using popularity and sentiment-based ranking.
- Achieved **Hit Rate (HR) = 0.8380** and **NDCG = 0.6136** under the standard 1-vs-99 evaluation protocol.

Customer Churn Analytics — End-to-End ML and Analytics Pipeline | GitHub

Python · XGBoost · LightGBM · SHAP · SMOTE · Scikit-learn · Matplotlib · Seaborn

- Built a descriptive-predictive-prescriptive pipeline on a telecom churn dataset; using SMOTE for class imbalance and engineered features to boost model signal; attained **96.8% accuracy** and **78.2% recall**.
- Benchmarked 8 classifiers and tuned XGBoost via RandomizedSearchCV.
- Utilized SHAP TreeExplainer to map top churn drivers to prescriptive retention playbooks; simulated positive ROI using Average Revenue Per User (ARPU)-based financial modelling.

BookMonkey — Online Book Store Portal | GitHub

React.js · Node.js · Express.js · MongoDB

- Developed a full-stack MERN e-commerce platform for buying, selling, and exchanging books.
- Integrates e-commerce functionality with a community-driven book exchange system, smart search filters, cart/wishlist management, and exchange history tracking.

EXPERIENCE

Full Stack Developer Intern | I & T Labs | Jul - Nov 2023

- Built Study Assistant, a full-stack tool that generates flashcards and quizzes from notes using the Groq API, with adaptive retesting and weak-topic drills.
- Implemented a strict JSON schema + validator layer for reliable LLM output and deployed it as a serverless app on Vercel.

Frontend Developer Intern | Oasis Infobyte | Aug - Sep 2023

- Designed and developed a dynamic college website UI using React.js and Bootstrap with strong focus on mobile responsiveness and clean UI architecture.
